

SureID Announces Release of SureID-Remote, Version 3.0

Mullica Hill, New Jersey. January 11, 2006. **Sure ID**, a leader in authentication solutions announces the release of **SureID-Remote** Version 3.0. The latest release of the award winning **SureID-Remote** provides customers strong, 3-factor biometric authentication for guarding access to corporate networks over the Web.

Major new features to **SureID-Remote** include:

- Increased user convenience with support for RFID authentication
- Support for the latest release of Check Point's security suite
- An API used to integrate into customized authentication infrastructures
- Support for Microsoft Windows XP and Windows Server 2003

"Our customers have enjoyed the ease of deployment, increased productivity, and unparalleled security provided by **SureID-Remote**," stated Steve Casey, president of **Sure ID**. "Now we have extended our offering by providing enhanced device support that better serves our common customers."

About Sure ID

Sure ID is a leading provider of authentication solutions. Using the latest in RFID and Biometric technology, **Sure ID** secures all points of access to critical corporate information with an authentication method that is both stronger and more convenient than passwords, PIN's, or tokens. Delivering security solutions since 1985, the Sure ID team consists of information and security veterans with decades of experience delivering enterprise security. Using patented technology, Sure ID's solution suite is used by the Fortune 500, government agencies, and large health organizations.
